

LIFT MOUNTING

FEATURES:

- Benchstand
- Straight Pedestals
- Offset Pedestals
- NRS Indicating Pedestals

GENERAL:

Waterman manufactures a wide variety of mounting devices, each for a specific application. Lifts may be mounted to a gate headrail or customer furnished pad utilizing the "benchstand" style mounting baseplate. This style is for use when the gate or structure provides a proper operator height without an extension. A pedestal may be furnished when additional support height is needed to bring the lift to proper or convenient operator height. When additional "reach" is required to align the operating stem with the gate or valve, an offset type pedestal may be selected. Pedestals are available in either high strength cast iron or may be fabricated from mild or stainless steel, depending upon the application. All Waterman lifts are compatible with either benchstands or pedestals.
